The table above shows past performance of the ETF from 21 March 2019. Index performance shown prior to 22 February 2019 is simulated based on the current Index methodology. Results are calculated to the last business day of the month and assume immediate reinvestment of distributions. ETF results are net of management fees and costs, but before brokerage fees or bid/ask spreads incurred when investors buy/sell on the ASX. Returns for periods longer than one year are annualised. Past performance is not a reliable indicator of current or future performance which may be lower or higher. The MSCI World ex Australia 100% Hedged to AUD Index ('MSCI World ex Aus Hedged') is shown for comparison purposes as it is the widely recognised benchmark used to measure the performance of developed market large- and mid-cap companies, weighted by market capitalisation. QHAL's index measures the performance of 300 companies selected from MSCI World ex Aus Hedged based on MSCI quality scores, weighted by market cap x quality score at rebalance. Consequently QHAL's index has fewer companies and different country and industry allocations than MSCI World ex Aus Hedged.

Key risks

An investment in the ETF carries risks associated with: ASX trading time differences, financial markets generally, individual company management, industry sectors, foreign currency, currency hedging, country or sector concentration, political, regulatory and tax risks, fund operations and tracking an index. See the VanEck MSCI International Quality (AUD Hedged) ETF PDS and TMD for more details.
